DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed February 11, 2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. (Examiner does not have a copy of some of the documents listed.)

Claim Objections

Claims 42 (and therefore dependent claims 43-49) are objected to because of the following informalities: in claim 1, line 16, "deposition" should be --deposited.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1641

Claims 42-49 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 42, line 6, recites the limitation "additionally comprising..." It is not clear as to what (the nucleation center or the recognition group) additionally comprises the recited elements.

Claim 42, line 18, recites the limitation "under appropriate conditions". It is not clear as to what conditions Applicants are referring, nor as to what conditions would be appropriate.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 42-47 and 49 are rejected under 35 U.S.C. 102(e) as being anticipated by Noppe et al., 5,491,098.

Nope disclose a method for depositing gold at one or more sites on a substrate (column 3, lines 34-35, and column 4, line 43 and 47), comprising:

Art Unit: 1641

- (a) providing nucleation centers (i.e., gold marker, column 4, line 43 and 47) at said one or more sites, wherein said nucleation centers are each coupled to a first member (i.e., binding counterpart, column 3, line 49-50) of a recognition group additionally comprising at least a second member (specific binding agent, column 3, line 47) capable of binding to the first member of the recognition group, wherein the second member of the recognition group includes or forms said one or more sites, and is bound to the first member of the recognition group said nucleation centers being selected from the group consisting of a metal particle, a cluster containing metal atoms, a metal-containing complex and molecules containing metal atoms (i.e., developer containing metal ions, specifically gold ions, column 3, line 51; column 5, line 3; and column 16, lines 22-23)
- (b) providing a treatment composition (i.e., developer containing gold ions, column 3, line 51; column 5, line 3; and column 16, lines 22-23) which comprises a soluble gold-providing agent and is kinetically stable so that gold is not deposited unless a nucleation center is present; and
- (c) contacting under appropriate conditions said one or more sites with the treatment composition whereby gold atoms are released from said gold-providing agent and deposited onto said nucleation center to form gold metal deposits at said one or more sites (column 3, lines 50-51.)

As to claim 43, the first member of the recognition groups is coupled to at least one nucleation center, the nucleation center being one or more of the group consisting

Art Unit: 1641

of: cluster containing metal atoms and metal containing complexes and metals (column 3, lines 46-50; column 5, line 33.)

As to claim 44, the one member of the recognition group is coupled to at least one nucleation center, wherein the nucleation center is one or more of the group consisting of gold particle, cluster containing gold atoms and gold-containing complexes and molecules (column 3, line 49-50; column 4, line 43 and 47.)

As to claim 45, the one member of the recognition group is coupled to at least one nucleation center, the nucleation center being one or more of the group consisting of cluster containing gold atoms and gold-containing complexes and molecules (column 3, line 49-50; column 4, line 43 and 47.)

As to claim 46, said recognition group is a member of the group consisting of: a receptor and a ligand (column 5, line 33.)

As to claim 47, said treatment composition is an aqueous solution (column 3, line 38; column 4, line 13.)

As to claim 49, said reagent is hydroquinone (column 5, line 8.)

Allowable Subject Matter

Claim 48 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Art Unit: 1641

Response to Arguments

Applicant's arguments with respect to the above rejected claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kobayashi (filed March 10, 2000) discloses a method for spectral sensitizing useful as a marker for diagnosis (column 1, line 9; column 52, lines 1-5.) Ooms, 5,266,442, discloses a method of improving silver image including the step of chemically sensitizing silver halide with gold sensitizer (column 2, lines 52-57; column 3, lines 49-53.) Bond discloses a method of photographic image enhancement comprising gold toning of silver image (column 3, lines 19-22, and lines 32-35.)

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ann Y. Lam whose telephone number is 571-272-0822. The examiner can normally be reached on M-Sat 11-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on 571-272-0823. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
